

A large, industrial machine used in tire production, featuring a complex arrangement of rollers and belts, set against a dark blue background with bokeh light effects.

Izumi America is able to produce a liner specifically needed for all parts of the tire production. Our main features that we can offer are:

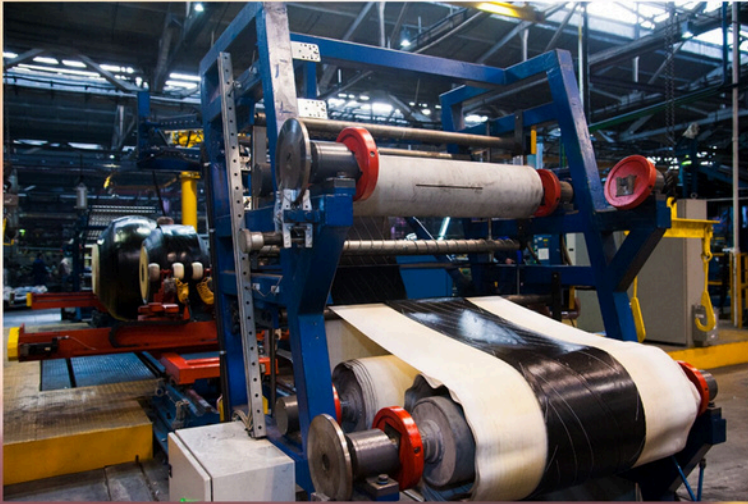

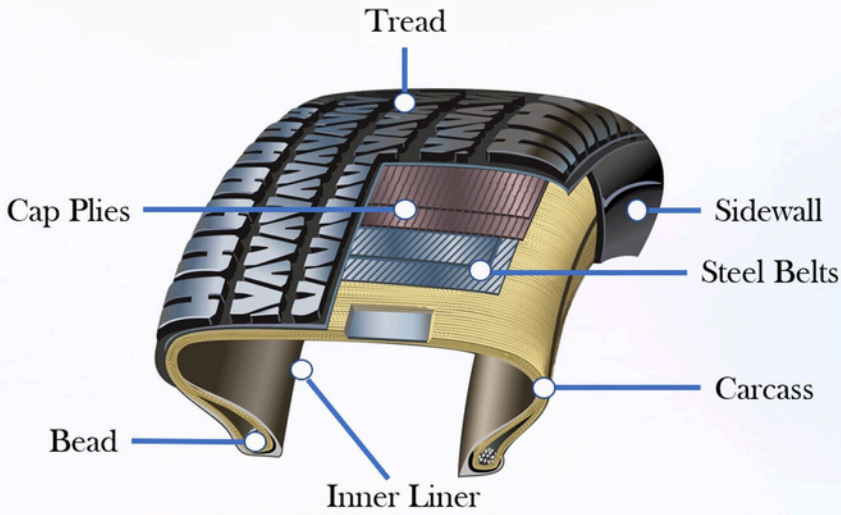

- Easy Release Properties
- Anti-fraying Edges
- Anti-wrinkle
- Antistatic Liners

All manufacturing can be adjusted to meet our customer's needs such as the stiffness or flexibility of the liner. By using a release liner suitable for the process, we can help reduce your loss rate and decrease waste. Izumi's liners have been proven to increase cost savings, productivity and improve tire production. Our durable liners can be used repeatedly which leads to lower costs over the long-term.

Custom length and width can be designed and manufactured to meet your needs and requirements. It is also possible to customize the coloring and install a lead cloth.
